

# Chartis Flexible Portfolio

## Investment Objective

The Flexible Fund is engineered to optimize risk-adjusted returns through dynamic asset allocation that can shift responsively with market conditions. Its objective is to seamlessly navigate between growth and income strategies by adjusting exposures across equities, fixed income, and alternative investments as economic environments evolve. Utilizing a research-driven approach, the fund employs quantitative models and macroeconomic analysis to guide tactical rebalancing and strategic positioning. This flexibility allows the portfolio to capitalize on emerging opportunities during market upswings while preserving capital during periods of downturn. With a strong emphasis on diversification and proactive risk management, the Flexible Fund is designed to provide a robust, adaptive framework that aligns with Chartis Asset Management's philosophy of delivering sustainable, long-term performance amid a constantly changing global financial landscape.

Returns shown above are based on lump sum investments. Past performance is not indicative of future results. The value of investments, including income derived from them, may fluctuate due to changes in market conditions, underlying asset values, and interest rates. This means the value of your investment may increase or decrease over time. All performance figures are net of investment management fees and taxes unless stated otherwise. Performance figures for periods longer than one year are annualized. Investing in the fund may not be suitable for all investors. It is strongly recommended that investors consult with their financial adviser to ensure the fund aligns with their investment goals and risk tolerance before making any investment decisions.

## Portfolio Manager Comments

The JSE Top 40 Index (ZAR) ended the month higher (+3.5%), despite some volatility due to president Trump's implementation of tariffs that sent shockwaves through financial markets. This month the resource sector was the weakest, despite ending up 1.3%, driven by an increased gold price and a weaker ZAR. Financials and Industrials both ended the month up more than 3%. Gold continued its run and ended the month up more than 5%. World markets were mixed for the month, with the MSCI World Index (USD), up 0.5%, the S&P500 down -0.7%, while the German Dax was up 1.5% (cushioned by the fiscal changes) and the Hang Seng was down -4.3%, being hit hard by the trade war.

The volatility accelerated in April, having reached the deadline for tariffs mid-month and consequently tariffs were introduced at very high levels. President Trump later delayed the implementation of tariffs by 90 days to provide time for the negotiations, which saw markets rally strongly..

In fixed income, the SA All Bond Index (ALBI) dropped by 2.5% (in ZAR), while global bonds were down -1.4% (in USD). Portfolio performance was supported by overweight positions in gold, gold stocks and financials relative to the ALSI.
