

# Global Fixed Income Portfolio

## Investment Objective

The Global Fixed Income Fund aims to provide a reliable stream of income and robust capital preservation by investing in a diversified portfolio of fixed income instruments across various regions and sectors. Its objective is to deliver steady, predictable returns while mitigating risks associated with interest rate fluctuations, credit quality variations, and currency volatility. The fund actively manages its portfolio through a combination of duration adjustments, credit analysis, and strategic currency hedging. By investing in a mix of sovereign bonds, high-quality corporate debt, and select emerging market instruments, the fund is positioned to benefit from global yield opportunities while maintaining a defensive posture during periods of market stress. This approach is reinforced by Chartis Asset Management’s meticulous research process and commitment to prudent risk management, ensuring that the portfolio remains resilient in diverse economic scenarios.

Performance Summary - Annualized

	3 Months	YTD	1 Yr	3 Yr	Since Inception
Global FI	-1,85%	-0,77%	0,46%	19,90%	32,84%
Benchmark	2,64%	3,18%	8,02%	1,95%	-0,31%

Benchmark - Investment grade, US dollar-denominated, fixed-rate taxable bond market. The index includes Treasuries, government-related and corporate securities, MBS (agency fixed-rate pass-throughs), ABS and CMBS (agency and non-agency)

Returns shown above are based on lump sum investments. Past performance is not indicative of future results. The value of investments, including income derived from them, may fluctuate due to changes in market conditions, underlying asset values, and interest rates. This means the value of your investment may increase or decrease over time. All performance figures are net of investment management fees and taxes unless stated otherwise. Performance figures for periods longer than one year are annualized. Investing in the fund may not be suitable for all investors. It is strongly recommended that investors consult with their financial adviser to ensure the fund aligns with their investment goals and risk tolerance before making any investment decisions.

Portfolio Manager Comments

Global bonds declined by 0.3% (in USD) In March, with market participants balancing inflation expectations with negative economic data and the backdrop of political uncertainty, especially the effect that tariffs might have on inflation data. Overall, we still feel that bonds are relatively more attractive than equities from a valuation standpoint, but that risks remain in the form of tight spreads, uncertainty about inflation, and large fiscal deficits.

High yield spreads widened ~70 basis points in March, while Investment grade corporate credit only widened by 10 basis points. The yield curve didnt change much in the month, with both the 10 year and the 2 year trading in a narrow 10-15 bps range.

Rate cut expectations in the US being little changed over the month, with no big surprises in the inflation numbers. The sector that performed best for the portfolio in the month, was MLPs, while TIPS and short to medium duration Treasuries were flat. Long dated treasuries were negative.
