

Global Fixed Income Portfolio

Investment Objective

The Global Fixed Income Fund aims to provide a reliable stream of income and robust capital preservation by investing in a diversified portfolio of fixed income instruments across various regions and sectors. Its objective is to deliver steady, predictable returns while mitigating risks associated with interest rate fluctuations, credit quality variations, and currency volatility. The fund actively manages its portfolio through a combination of duration adjustments, credit analysis, and strategic currency hedging. By investing in a mix of sovereign bonds, high-quality corporate debt, and select emerging market instruments, the fund is positioned to benefit from global yield opportunities while maintaining a defensive posture during periods of market stress. This approach is reinforced by Chartis Asset Management's meticulous research process and commitment to prudent risk management, ensuring that the portfolio remains resilient in diverse economic scenarios.

Global FI vs Benchmark

Performance Summary - Annualized

	3 Months	YTD	1 Yr	3 Yr	Since Inception
Global FI	4,80%	4,00%	1,44%	21,41%	32,25%
Benchmark	0,54%	3,75%	3,38%	1,64%	-0,19%

Benchmark - Investment grade, US dollar-denominated, fixed-rate taxable bond market. The index includes Treasuries, government-related and corporate securities, MBS (agency fixed-rate pass-throughs), ABS and CMBS (agency and non-agency)

Returns shown above are based on lump sum investments. Past performance is not indicative of future results. The value of investments, including income derived from them, may fluctuate due to changes in market conditions, underlying asset values, and interest rates. This means the value of your investment may increase or decrease over time. All performance figures are net of investment management fees and taxes unless stated otherwise. Performance figures for periods longer than one year are annualized. Investing in the fund may not be suitable for all investors. It is strongly recommended that investors consult with their financial adviser to ensure the fund aligns with their investment goals and risk tolerance before making any investment decisions.

Portfolio Manager Comments

Global bond markets remained supported during July as moderating inflation and improving financial conditions reinforced expectations for monetary policy easing across developed markets. The Federal Reserve maintained its policy rate at 4.25%–4.50%, while inflation in the United States continued trending lower. Global sovereign bond yields moved modestly lower during the month, supporting fixed income returns, while risk assets remained stable with the MSCI World Index delivering moderate gains. Within this environment the portfolio remained positioned toward high-quality global sovereign and investment-grade credit exposure, benefiting from declining yields while maintaining prudent duration exposure given lingering macroeconomic uncertainty.
