

Chartis Balanced Portfolio

Investment Objective

The Balanced Fund seeks to deliver consistent, risk-adjusted returns by blending a growth-oriented equity portfolio with a substantial allocation to income-generating fixed income and select alternative investments. Its primary objective is to achieve both capital appreciation and steady income, while managing overall portfolio risk through diversification. The fund pursues this by combining high-quality equities in resilient sectors with fixed income instruments such as government and corporate bonds that offer stability and predictable cash flows. By integrating alternatives and adopting a tactical asset allocation strategy, the fund is well positioned to adjust to varying economic conditions and market trends. This balanced, multi-asset approach is underpinned by a disciplined research process and continuous risk monitoring, reflecting Chartis Asset Management's dedication to delivering long-term value and capital preservation.

Returns shown above are based on lump sum investments. Past performance is not indicative of future results. The value of investments, including income derived from them, may fluctuate due to changes in market conditions, underlying asset values, and interest rates. This means the value of your investment may increase or decrease over time. All performance figures are net of investment management fees and taxes unless stated otherwise. Performance figures for periods longer than one year are annualized. Investing in the fund may not be suitable for all investors. It is strongly recommended that investors consult with their financial adviser to ensure the fund aligns with their investment goals and risk tolerance before making any investment decisions.

Portfolio Manager Comments

March 2026 was exceptionally difficult for South African markets and the balanced portfolio, as the FTSE/JSE All Share Index fell sharply amid geopolitical risk, weaker emerging-market appetite and collapsing precious-metal prices. The SARB kept rates at 6.75%, but inflation uncertainty from the Iran war increased expectations of further tightening, pressuring both equities and bonds. The rand also weakened, while foreign investors reduced exposure to South African bonds. The portfolio's 35% allocation to local bond ETFs offered some defensive support but still declined as yields rose. South African equities were the main drag, especially mining holdings such as Gold Fields, AngloGold, Sibanye, Northam and Pan African Resources. Financials, property, telecoms and consumer staples also weakened, although Stadio and Grindrod were positive contributors. International holdings provided partial diversification benefits, with gains from Palantir, NVIDIA, Expedia, Insmed, Astellas, Mitsui and Mitsubishi, partly offset by weakness in Micron, Advantest, Ford, Siemens Energy, Cameco and Newmont. Overall, performance was hurt by concentrated pressure in South African mining and domestic assets, while global diversification helped cushion some losses. The outlook remains cautious, with risks from further rate hikes, geopolitical uncertainty and commodity-price weakness, but lower valuations may create selective opportunities.
